DURAL

THE TASK

The design of your bathroom currently requires the consideration of a variety of interests. Secure waterproofing, modern design, low maintenance and practicability need to be harmonised.

One area, which often is not sufficiently thought through during planning, is how in particular shampoo, shower gel and co. can be stored in shower areas. Safe, within easy reach, harmoniously integrated in the design, yet easy to maintain - these are the wishes of clients, while stable fastening without damaging the tile or even the compound seal are the technical requirements for the contractor.

THE SOLUTION: TI-SHELF

The TI-SHELF shelf offers a solution which equally optimises design, function and technology. Easy to integrate in ceramic tiling, you obtain top stability by absorbing the forces on the tile without damage to the surface or seal. Top-quality V2A stainless steel with a modern brushed surface guarantees long-time durability and easy maintenance.

Tileable shelves from stainless steel for shower, bath and living areas

- Product information -

A variety of shapes and sizes offers plenty of leeway for design. Be it a classic triangle, rectangle or variants in trapezoid shapes, as a corner solution or for wall surfaces, any wish can practically be granted. Thanks to the free choice of insert, the tile design can be incorporated, but it is also possible to create interesting design elements by applying deliberately contrasting designs. The brushed surface of stainless steel blends in elegantly with the entire image.

MATERIAL CHARACTERISTICS AND CARE

The TI-SHELF series shelves are manufactured from top-quality rustproof stainless steel. The V2A stainless steel is basically insensitive to tile cement, grouting material or cement residue remover, which can come into contact with the material during tile-laying. Nevertheless, we recommend that you immediately thoroughly clean the shelves after assembly with clean water.

TI-SHELF shelves do not require any special care beyond how you normally maintain a shower. Any cleaning should be made using a neutral household cleaner and without mechanical action.

TREATMENT (QUICK GUIDE)

TI-SHELF shelves are easy and quick to install during tile-laying. Apply the TI-SHELF to the upper edge of the lower tile and fully embed it into the tile cement. Then notch the tiles appropriately. Insert custom cut decorative tile using an adhesive. Make sure to maintain a gentle gradient. Seal the wall connection with silicon, flex grout can be used for the joint on the front edge.

The TS-DNG and TS-DNS models can also be installed later. To do so, remove the grout. Fasten and seal with silicon.

INDICATIONS

Please refer to our detailed tile-laying instructions online at www.dural.de. The generally accepted rules of technology should be observed! The following applies to all products/materials: Usability in terms of mechanical and chemical loads should be carefully checked in each case before laying the tile.
